Stay in Contact Throughout Your Facility

Mobility is paramount to staying connected to your customers and your team, and being as productive away from your desk as when you're at it. The ability to go anywhere in your facility and do anything—while staying connected to your communications and messaging system—is a reality, thanks to Toshiba's powerful line of wireless and cordless telephones and soft phones. Access voice mail and your company operator anywhere in the building. And take advantage of all the system's advanced calling features almost anywhere you go within your facility.

Maximize the Value of Your Wireless LAN

Toshiba gives you the power to stay connected using wireless IP telephones and SoftIPT™ soft phone clients that run on your laptops, tablet PCs, or PDAs via your wireless Local Area Network (WLAN). You can roam anywhere your WLAN goes and maintain voice and data functionality.

With Toshiba's Wireless Network Camera you can capture live, high resolution video viewable from anywhere in the world, via the Internet, using a standard web browser. It's an exceptionally easy and remarkably cost-effective solution that makes the most of your current network resources.

Toshiba mobility solutions maximize the value of your wireless Local Area Network (WLAN) by using your existing WLAN infrastructure. This makes very cost-effective mobility applications possible with Strata CIX™ solutions.

Toshiba Cordless Digital Telephones

Toshiba gives you the ability to take full digital desk phone functionality with you, whether it's down the hall, into the conference room, or across campus. In fact, they are the only cordless telephones that allow you to access some of today's most advanced desk phone features, such as desk phone extension numbers, call forwarding, Caller ID, and multi-line access.

You can even switch between your cordless and digital desk telephones during a call. And thanks to spread-spectrum and narrow band technologies, Toshiba Cordless Digital Telephones safeguard your phone's frequency range, plus deliver maximum security.

SpectraLink Wireless Telephones

For mobility solutions requiring wider area coverage within the enterprise, Toshiba's relationship with SpectraLink makes it possible to customize wireless telephone features and fully integrate your wireless telephone force with Toshiba Strata systems.

Wireless telephone models can operate within a micro-cellular architecture within your facility or over your wireless Local Area Network. So you can leverage your existing investment by combining voice and data applications on the same wireless LAN.

SPECIFICATIONS

SoftIPT Computer Compatibility	PCs running Microsoft Windows XP operating system, and enabled for wireless 802.11 networks.
